Office Action Summary

Art Unit: 2645

A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied by a statement that it contains no new matter. Sentences such as the 2nd to last sentence on page 4 make no sense to examiner. Neither do most of the other sentences throughout the spec. Applicant is to carefully re-write the spec complying with idiomatic English sentence structure.

Claims 4-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 4, there is no antecedent basis for "the mail address", "the unanswered call", "the incoming call". Claim 5 is not described in the spec as to how this is accomplished. Claim 6 need to be re-written because examiner has no idea what applicant means and there is no antecedent basis in the claim for "the information". Claim 7 makes no sense to the examiner because it makes no sense to examiner either. There is no antecedent basis in claim 8 for "the facsimile number" and "the unanswered call"

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

Art Unit: 2645

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-8 as understood are rejected under 35 U.S.C. 102(e) as being anticipated by Martino '382 or Segal et al '251.

Martino discloses a portable telephone, in the form of a cellular telephone, col. 32, lines 5-6. Martino's phone is also capable of establishing an Internet connection, col. 6, lines 5-10. Martino discloses in col. 7, lines 55-60, that "[T]he data transactions created by the server (TAS) ...can be broadcast via the Internet or via the telephone system using a cellular, wired, or wireless modem." In col. 14, lines 33-49, Martino discloses that transaction device (12) has input and output ports (74/76) for the receipt and dissemination of facsimile data, and since the server is connectable to the Internet, that Internet data is capable of being faxed from one location to another through the use of Martino's TAS (12).

Segal et al disclose a portable cellular telephone that is capable of establishing an Internet connection (description of Fig. 32). Segal discloses in col. 29, lines 38-45, that their cellular phone is capable of reading text-based messages, and a computer can then send the message to the remote user such as by an E-mail.
